American Psychiatric Publishing. Paperback. Book Condition: new. BRAND NEW, Handbook of Diagnosis and Treatment of Bipolar Disorders, Terence A. Ketter, This readable guide to the assessment and management of patients with bipolar disorder can help physicians keep abreast of dramatic and rapid advances of recent years and integrate them into their practice. Handbook of Diagnosis and Treatment of Bipolar Disorders emphasizes recent controlled studies and FDA-approved indications and translates these data into the real world of clinical practice. The contributions of the eleven chapter authors from Stanford University reflect more than a decade of clinical research and treatment undertaken at that institution, including advances in diagnosis and interventions supported by controlled studies. They provide crucial information regarding diagnosis, pharmacotherapy, psychotherapy, and treatment of patients from special populations -- such as children, women, and older adults -- and patients with particular challenging illness course such as rapid cycling. This is the first book to provide quantitative assessment of potential benefit (number needed to treat) and risk (number needed to harm) for all approved treatments for bipolar disorder, providing clinicians with information needed to balance benefits and risks in order to render individualized state-of-the-art, evidence-based care. It describes all FDA-approved indications -- reviewing efficacy, safety, tolerability, pharmacokinetics, illness phase-specific dosing, and drug interactions. A chapter on multiphase treatment strategy explains crucial illness transition points and describes how these have been integrated with knowledge of illness phase in mood disorders. The book then demonstrates the relevance of this approach to therapeutics by providing: * An overview of pharmacotherapy that covers the emergence of evidence-based pharmacotherapy and number-needed-to-treat and -harm analyses.* Guidelines to managing acute manic and mixed episodes that include evidence-based assessments of lithium, divalproex, carbamazepine, and second-generation antipsychotics.* Coverage of acute major depressive episodes in bipolar disorders that outlines four tiers of...
